

Create a program to count the number of characters and lines in a source file

```
import java.io.*;

public class Main {

    public static void main(String[] args) {

        try {

            FileReader f = new FileReader("input.txt");

            int ch, count = 0, lines = 1;

            while ((ch = f.read()) != -1) {

                count++;

                if (ch == '\n')

                    lines++;

            }

            f.close();

            System.out.println("Number of characters: " + count);

            System.out.println("Number of lines: " + lines);

        } catch (IOException e) {

            System.out.println("File not found");

        }

    }

}
```

Main.java

Run

Output

```
1 import java.io.*;
2 public class Main {
3     public static void main(String[] args) {
4         try {
5             FileReader f = new FileReader("input.txt");
6             int ch, count = 0, lines = 1;
7             while ((ch = f.read()) != -1) {
8                 count++;
9                 if (ch == '\n')
10                     lines++;
11             }
12             f.close();
13             System.out.println("Number of characters: " +
14                               count);
15             System.out.println("Number of lines: " + lines);
16         } catch (IOException e) {
17             System.out.println("File not found");
18         }
19     }
20 }
```

File not found
